

Live Graphics

How to use a second neutral live graphic rotation

Managers may want to use an additional live graphic rotation for their broadcasters.

You will need:

- An extra dedicated Twitch account that will host the neutral rotation
- A campaign with no other live graphics than the ones used in this rotation
- Your image assets for the live graphic rotation

Steps to follow:

1. Navigate to campaign you wish to use for the neutral rotation
2. Under the components tab, create each live graphic component needed

3. Under the management tab, add the broadcaster mentioned above to the campaign

4. Under the channels tab, give a unique label to the channel mentioned above.

5. Under the components tab, assign this label created in #4 to each of the live graphic components in your campaign.

You're Done!

The broadcaster account you used will now have exclusive access to the live graphics from your campaign. You may now share that live graphic rotation, located at api.adv.gg/browsersource/{broadcaster account name}/, to any other broadcaster. They can add this URL as an extra browsersource on their broadcasting software of choice.
